

Abbotsford, Sumas & Matsqui News

Twelfth Year. No. 36

Abbotsford, B.C. Wednesday, September 4th, 1935

Ten Cents per Month.

"MIKE" MURPHY, COLORFUL PUBLIC FIGURE, SUCCUMBS TO OPERATION

Michael Murphy, prominent resident of Huntingdon and Sumas, passed away in Vancouver General Hospital yesterday. Two weeks ago, deceased entered the city institution and underwent an operation, and a further operation was found necessary. It was performed yesterday, but Mr. Murphy, who is in his 70th year, did not rally from the anaesthetic.

"Mike" Murphy was one of the most interesting figures in this section of the Fraser Valley. A Cork Irishman of Shavian build and characteristics, he was known for a rugged individualism which accepted no doctrine or argument until it had passed his own convictional analysis. And, having thus formed his own conclusions, without regard for popular opinion, he would crusade with unwavering hostility or loyal allegiance, according to the bias of those conclusions and the momentous questions involved.

Man of Strong Convictions

Many hated him, but many loved him for this extremist tendency. Instances of "Mike's" "against-ness" or "for-ness" in public issues of the past are legion, and many an old-timer will smile, perhaps with some admiration, in recollection of some of the strategy of this doughty campaigner. For, in public affairs, Mike spared neither friend nor foe, should their opinions counter. In just due, it is only fitting at this time to record the fact that, while retaliating vigorously to any overture he considered hostile, there is no instance on record of Mike Murphy attempting to manipulate public issues for his own personal material profit. He gave of his time and money freely in public service, was an unrelenting enemy, but a loyal friend.

Came Here 42 Years Ago

Deceased was one of the earliest settlers of the district, coming to Huntingdon 42 years ago. A native of Skibbereen, County Cork, Ireland, and member of a long line of farmers, he emigrated to America when a young man, arriving in New York in 1880. He crossed the continent to San Francisco, and came to Seattle in 1886 and worked in northwest logging camps. Three years later he answered the homesteading lure in British Columbia, filing upon a pre-emption at Murphy's Landing on the Fraser River near Ridgedale, Matsqui. He interlarded his farming efforts with mining work on Texado Island and at a job on the B. & M. Railway, running to Bellingham.

The late Mr. Murphy was of the Roman Catholic faith and an adherent of St. Ann's church here. He repeatedly sought municipal office as a means to effect certain changes which he aggressively advocated, and four years ago successfully contested the ward four seat, covering Sumas lake area. The following year he offered himself for the reeveship and won the seat. His second term as executive of Sumas municipality, taken by acclamation, was curtailed by disqualification proceedings, repercussion of overt gestures he himself initiated against members of his Council who declined to support some of his resolutions. Deceased was also familiar with local school affairs, having served as trustee for several terms in the early days.

Funeral Service on Friday
Mrs. Murphy pre-deceased her husband less than two weeks ago. Surviving are two brothers, John, of Huntingdon; Dennis, residing in Ireland; two sisters, Mrs. Kelly, Alameda, Cal.; Mrs. Miller, San Francisco, Cal.; and one daughter, Mrs. W. Sterry, Huntingdon. Mr. Murphy married twice.

Funeral Service on Friday

Requiem service is to be held at deceased's home, Huntingdon, tomorrow evening at 8 p.m. and the funeral service is arranged for Friday forenoon at 10 a.m. in St. Anne's church, Rev. Father Csaki, D.D., D.Ph. officiating.

REDICULOUSLY LOW PRICES

AT MORRIS AUCTION SALE

A price of \$34 for a good team of heavy work horses and \$5 to \$21 for cows was reported obtained at the Morris auction sale conducted by a Langley auctioneer in Matsqui this week. The crowd of buyers was Mr. Morris plans to return to New Zealand, where he formerly resided.

Prayer Book Thief Apprehended

The mysterious disappearance of prayer books from St. Matthew's church has at last been traced to its source. It wasn't any youthful Bagley nor was it anyone seeking spiritual literature in an unorthodox manner, but a dog, apparently stricken with religious fervor. The culprit was observed by Constable Patten and other witnesses, last Sunday evening, making away from the church with two of the prayer books in his mouth.

The Stevens Reconstruction Party holds its nominating convention today in the Masonic hall, when candidate for the Fraser Valley riding will be named. Mr. Aubrey M. Clarke, tentative nominee of the party, is in Abbotsford for the occasion, and is available for the nomination. He is accompanied by Mr. W. D. Johnson of

Federal Cabinet Ministers Pose for Photograph

New members of Federal Cabinet. Left to right—Hon. J. E. Lawson, K.C., Minister of National Revenue; Hon. Reg. Geary, K.C., Minister of Justice; Prime Minister R. B. Bennett; Hon. Wm. G. Ernst, K.C., Minister of Fisheries; and the Hon. Samuel Gobeil, Postmaster General. The photograph was taken on Parliament Hill just after the new ministers had attended their first Cabinet Council.

Ushered in with a colorful parade and addresses by prominent citizens, Vancouver's annual Pacific Exhibition, opened last Wednesday, closes today. The exhibition enjoyed one of the largest attendances in its history, with an unusually large attendance from the Valley over the holiday week-end. Farmers from this part of the Valley entering exhibits were exceptionally successful, winning recognition in various classes.

ABBOTSFORD

The Sumas-Abbotsford high school starts out the new term with an enrollment of 108, an increase of 2 over last year. There is an unusually large number of pupils in first year—54. The staff is the same as last year, consisting of Mr. Topper, Miss Berry, Mr. Herlihey and Mr. Burton.

A crew of men under Mr. J. A. McDonald, are busy erecting a house on the property adjacent to the Henderson funeral home west of Abbotsford. The dwelling is occupied by Mr. W. J. Minns, a Vancouver photographer.

Enrollment at Abbotsford public school yesterday totalled 237, but 37 of these pupils were absent from their studies.

Mr. A. Burnier, operator of the Abbotsford Taxi, has returned from a three-month visit to his native home in Switzerland.

Miss Archibald, matron of the M.S. A. hospital, returned last week from a two-weeks motor tour of California. She was accompanied by her sister, and drove down to San Francisco via the Coast (Redwood) highway.

Mr. and Mrs. H. McDonald and family have taken up residence in the house on the old Yale road west of Abbotsford formerly occupied by Mr. and Mrs. Pickens.

The house being built for Mrs. M. Golos of Kilgord, on the Yale road west of Abbotsford is nearing completion.

The B. C. Electric maintenance crew have just completed erection of a line on the Huntingdon road, Pear-donville, which will give light and power to six homes.

Failure of the orchestra to arrive caused cancellation of a dance to have been held in the Orange hall on Tuesday of last week.

Vacancies occurring upon Abbotsford public school staff by the marriages of Miss Redman and Miss McPhee are filled by Miss Laurel Rowntree of Vancouver, and Miss Naomi McPhee of Whatcom road school.

Mr. and Mrs. Phillips, Yale road, turned last week from an enjoyable automobile trip through the Cariboo district to Quesnel. "If what we saw is any indication of the game resources, there'll be lots of moose steaks brought down this fall" commented the B. C. E. R. sales manager.

The staff at the Abbotsford Bakery are busy just now, supplying bread to the hop yards, in addition to their normal business.

Reggie Paul, a Sechelt Indian, was fined \$25 or option of 30 days in jail last week in Sumas police court, on a charge of having beer in his possession.

Mr. Church of Vancouver was in Abbotsford on Saturday inspecting a typesetting machine which he has purchased from The News.

Mr. Rochon has purchased a small house and two lots on the side road adjacent to the Manse residence.

Mr. and Mrs. H. Hansen spent the holiday weekend in Victoria.

Miss Enid Woods of Vancouver visited her parents, Mr. and Mrs. E. A. Woods at the holiday week-end.

The exterior of Buckerfield's Ltd. feed warehouse here has been recovered.

Miss Connie Reith visited at the home of her parents last week.

Mr. Stockwell has repaired his residence on McCallum rd. north.

WORLD HAPPENINGS BRIEFLY TOLD

Number of fatal accidents in Ontario for the first six months of 1935 was 201, greater than in any similar period since 1931.

Hugh Walpole, the British novelist, arrived at New York on the liner Ile de France, bound for Hollywood to do a screen version of "Oliver Twist."

The Shantung government estimated 5,000,000 persons were homeless within the province as a result of the destructive Yellow river floods of recent weeks.

Two Royal Air Force officers, R. L. Nimmo and S. J. Marbutt, were killed in a crash when Nimmo refused to make a forced landing in an open field because he saw a crowd of children playing there.

A large order for a new type of light bombing plane capable of making 275 miles an hour has been placed for the Royal Air Force, the aviation editor of the London Daily Telegraph said.

Prison bars, which if pierced by a prisoner's saw would sound an automatic alarm and release a flood of water or tear gas, were demonstrated by U.S. Marshal John J. Murphy. The bars are made of hollow pipes containing water or tear gas.

Because of the demand for the Italian soldiers in Ethiopia, there is an acute shortage of lemons in Liverpool, less than half the normal quantity of Italian lemons being sold on the Liverpool Fruit Exchange.

France's first stratosphere airplane was wrecked in a test flight killing its pilot, M. Cagno, 28. The plane, which has been three years in construction, featuring a sealed cabin, was undergoing a final test when it crashed near Bonnières.

Art Of Early Indians

Learned Many Things Long Before White Men Knew Them

Indians in Central America used anaesthetics long before Columbus made his voyage of discovery, and were acquainted with the fundamentals of mathematics long before white men learned them, according to Mr. Gregory Mason, American explorer and archaeologist. "How many Americans realize," Mr. Mason asked, "that the Toltecs built a pyramid three times as great in bulk as the largest in Egypt, that the Peruvians made tapestries finer than any of Europe, and that the Mayans invented zero 600 years before the Hindus—which means that the Mayans were able to multiply and divide 1,000 years before Europeans could. The red-skinned natives of Yucatan, whom Cortez called 'barbarians,' were better astronomers than the Europeans, and had a calendar far more accurate than the one Columbus was using, and in some ways even superior to the one we use to-day."

Most Intense Cold

Machinery Now Creates Temperature 100 Degrees Below Zero

One hundred degrees below zero, the most intense cold yet used on a big industrial scale, was announced by the Du Pont Company of Wilmington, Delaware, in the making of synthetic rubber.

The temperature is lower than anything naturally occurring on earth, where the bottom reported is 90 below in Siberia.

The Du Pont plant represents a bold step in the encroachment of machines into regions of cold too dangerous for human touch, but which science shows will cheapen and simplify industrial processes.

The 100-below cold will be used as one factor in separating from acetylene the substance which is the base of synthetic or artificial rubber. This is mono vinyl acetylene, one of acetylene's gases.

Has Turned The Corner

Prosperity has turned the corner in Port Elgin, Ontario, and nobody is on relief. Out of a total of \$26,416.30 on the tax roll for 1935, \$14,102.86 was paid into the office of the village treasurer, J. J. Chapman. Only one half of the total taxes was actually due.

Aviator Runs Into 'Hoppers'

How high can a grasshopper hop? That's the question air mail pilots are asking these days. Pilot R. O. Bain who arrived in Winnipeg from the south said he ran into a flock of 'hoppers' at 9,500 feet over Billings, Mont.

A novelist says he recently coined a new word while shaving. His razor must be something like ours.

Stories To Be Investigated

Search Started For Mysterious Tropical Valleys In British Columbia

Indian stories from the North that tropical valleys, filled with luxuriant vegetation, exist in northern British Columbia, green oases in the midst of snow-capped mountains, will be investigated by Dr. Charles Camsell, Deputy Minister of Mines. He left Ottawa for the West to begin a 10,000-mile exploration trip designed primarily to gather information on one of the last remaining blank spots on maps of northwestern Canada. For years tales have reached Ottawa that tropical valleys exist in an unmapped area along the Yukon-Northwest Territory boundary. Several have been found, fed by hot springs, with tropical plants growing in profusion. There have been tales of prehistoric animals surviving in the valleys, but they have remained tales.

As early as 1898, during the Klondike gold rush, Dr. Camsell camped in one of the hot spring valleys further south, and more recently Dr. and Mrs. N. J. Henry of Philadelphia found one, perhaps the same one. But the valleys remain mysteries, their extent, whether they are free from snow during the long winters and their flora and biology. Indians have referred to the valleys for years, but have steered clear of them through superstition.

Dr. Camsell will explore the area from the air in a plane piloted by C. H. "Punch" Dickens, a veteran Northern flier. He will be accompanied by A. D. McLean, superintendent of Airways, Department of National Defence, and W. H. Sutherland, photographer. The blind spot contains 25,000 square miles through which white men never have travelled.

Recipes For This Week

(By Betty Barclay)

TOMATO RELISH

3 cups (1½ lbs.) prepared tomatoes
6½ cups (2½ lbs.) sugar
1 bottle fruit pectin
To prepare tomatoes, scald, peel and crush about 2½ pounds ripe tomatoes, or use canned tomatoes. Boil 4 cups crushed tomatoes 10 minutes, uncovered, stirring occasionally. Add ¼ cup lemon juice and grated rind of 1 lemon. (For use with meats, add ½ teaspoon each ground cloves, allspice, and cinnamon, or Worcestershire sauce to taste.) Measure sugar into large kettle. Add prepared tomato, filling up last cup with water if necessary. Mix well and bring to a full rolling boil over hottest fire. Stir constantly before and while boiling. Boil hard 2 minutes. Remove kettle from fire and stir in bottled fruit pectin. Skim; pour quickly. Paraffin at once. Makes about 9 glasses (6 fluid ounces each).

DRIED FIG JAM

3 cups (1½ lbs.) prepared fruit
5 cups (2½ lbs.) sugar
1 bottle fruit pectin
To prepare fruit, chop fine ¾ pound stemmed stewing figs. Add 2 cups water and juice of 2 medium lemons; mix. Measure sugar into large kettle, add prepared fruit, filling up the last cup with water if necessary. Mix well, bring to a full rolling boil over hottest fire. Stir constantly before and while boiling. Boil hard three minutes. Then remove kettle from fire and stir in bottled fruit pectin. Pour quickly. Paraffin hot jam at once. Makes about 9 glasses (6 fluid ounces each).

A City Of Trees

Addis Ababa In English Means The New Flower

In the king's English, Addis Ababa, capital of Ethiopia, means "the new flower." Dr. Marshall A. Howe, newly-elected director of the New York botanical garden, said that contrary to general belief, it is a city of trees and many gardens, an excellent spot for flower growing.

Few persons pronounce Addis Ababa correctly, says the United States geographic board. The board says it is "Ahddis Ahwawa," with the accent on the first syllable of each word.

A staff of about 700 cooks, waiters, stewards, stewardesses and their assistants will be required to serve meals on the Queen Mary, it is said. As many as 40,000 meals will be served on each crossing of the Atlantic.

Melons grow best in slightly acid soil.

BACK AT CONTROLS

Right Hon. "Jim" H. Thomas, British Minister of the Dominions, is seen back in his old place on the footplate of a locomotive. He was at Corby inspecting a huge steel plant when he climbed aboard the locomotive and drove a train-load of steel tubes from the works.

Youngest Girl Stowaway

Twelve-Year-Old Visited Normandie And Remained On Board

Officers of France's record-breaking liner Normandie are proud of her Atlantic blue-ribbon but they were not so proud of their newly-acquired distinction of having carried the youngest girl stowaway in maritime annals, 12-year-old Joan Dailey of New York.

As the Normandie steamed out of New York, Joan stepped up to the bridge deck and announced herself a stowaway.

Matters were simplified by receipt of a wireless from Joan's frantic mother. Money for her passage was sent.

The child explained she went aboard to visit the Normandie in New York and could not bear to leave the ship. Her brother was with her, but he refused to share the adventure.

Experts Work On Mystery

Trying To Find Noise Which Interferes With Geodetic Survey

The U.S. coast and geodetic survey bent its efforts toward solving the mystery of the "haunted ocean," which has rendered useless its delicate instruments and thwarted map making.

Coming apparently from the floor of the ocean somewhere southeast of Long Beach, California, a noise starts interfering about 11 a.m. daily, and increases in volume until nightfall, when it diminishes.

Lieut.-Com. O. S. Swainson took the survey boat Pioneer out and anchored it off oceanside, at a point about 60 miles from Long Beach, and settled down to scientific sleuthing which he hopes will solve the mystery.

Whales Sleep Under Ice

After whales in the arctic regions have breathed fresh air for about twelve minutes, their blood is so aerated that they are able to go to sleep under the ice for several hours—without breathing.

Giant Cobras Aid Science

Venom To Be Used In Serum As Substitute For Narcotics

Two cubic centimetres of venom, enough poison to kill 140 men, have been extracted from an eleven-foot king cobra in a squash racquets court of the Staten Island Club, 287 St. Mark's Place, St. George. Four strong men, headed by Carol Stryker, director of the Staten Island Zoological Society, the owners of the reptile, were required to perform the operation.

Elaborate precautions were taken lest the snake bite some one. Mr. Stryker and his assistants were equipped with twelve peculiar-looking instruments to control the reptile's movements. There were forked sticks, nooses, hoods, and hooks. A sixteen-gauge shotgun, both barrels loaded, was placed against the wall of the court.

After the venom had been extracted it was turned over to Dr. Samuel M. Peck, chief of the dermatological staff of Mount Sinai Hospital, Fifth Avenue and 100th street, New York. Dr. Peck, for the last few years, has been perfecting a serum compounded from cobra venom which is expected to replace narcotics for alleviating severe pain.

Dr. Peck said that his experiments had been hampered considerably by lack of sufficient venom, and that the liquid extracted would be sufficient for 1,500 treatments. It requires almost three weeks to transform the venom into a usable serum. He said that large quantities of the venom would be needed for laboratory tests before the active principle, or the ingredient which determines the therapeutic value of the serum, could be established.

Resented Inspector's Remark

Criticism Of Child's Essay Causes Uproar In British House

London.—The House of Commons went into an uproar of cries of shame and disapproval when it was reported an inspector of the Manchester schools had reproved a child who called England the finest country in the world.

Little Maud Mason, 12, wrote an essay in honor of King George's jubilee celebration saying:

"England is only a small country but it is better than any other country because it has a good king and queen to reign over it."

According to the report taken to the house, a school inspector reprimanded Maud's teacher in front of her class for teaching "old-fashioned imperialism."

World's Oldest Jew

Although born in Poland, the world's oldest Jew is an Irish Free State citizen and proud of the fact. He is Joseph Levi, of Cork, who has celebrated his 103rd birthday. He has lived most of his life in Ireland. Levi does not move around much, but he is a cheerful old man, and says his health is so good that he thinks he will live another 100 years.

Seed Potatoes For Cuba

Canada supplies 90 per cent. of the seed potato market in Cuba. Cuban potatoes replanted in Cuban soil will not reproduce a saleable product, hence all seed is imported. Two crops of potatoes are harvested in that country every year.

An Amazing Sentence

Recorder Fines Montreal Court To Help Homeless Man

One of the most amazing sentences on record in Montreal's recorder court was handed down in chambers by Recorder Plante.

He condemned "the bench" (himself); Louis Lapointe, clerk of the court; five lawyers present, two constables and two newspapermen to pay 25 cents each. The "fines" went to an aged, homeless vagrant before the court.

Police brought in a dishevelled, bearded old man named Paul Cleron, charged with vagrancy. He was picked up on Champ de Mars. He pleaded guilty.

"I have no home," he said when questioned.

Recorder Plante eyed those in the courtroom: "I sentence you all to put 25 cents each on my desk; we'll help out this poor old man. And sentence applies to the bench, too."

One by one, 11 25-cent pieces—\$2.75 in all—were laid on the desk.

Recorder Plante took it, placed it in the old man's pocket saying: "Go." Sentence was suspended.

Impossible To Answer

Londoner Can Ask Embarrassing Questions According To Minister

The Londoner is one of the world's best askers of embarrassing questions, Rev. Dr. D. O. Soper told a service club in Toronto.

For eight years Dr. Soper has mingled with the crowds on Tower Hill and talked to them from wall or soap-box.

"If God controls the elements, why do churches have lightning conductors?" was the query put to him on one occasion. He let it pass.

Another time he was speaking about temperance and was queried about America. Dr. Soper elicited the fact his questioner had never been to America, and advised him not to talk of what he knew nothing about.

"Have you ever been to heaven?" was the question shot back at him—with obvious results.

Have Not Great Fortune

Dionne Babies Not As Rich As People Think

The quintuplets of Oliva and Elzire Dionne are not nearly so wealthy as many persons believe, Dr. Allan Roy Dafoe says.

They have \$45,000 in bonds and cash, and contracts now in force will probably bring them another \$25,000. Their fortune has been estimated at \$200,000, but if they have it the babies are holding out on the doctor. In their 14 months of life the youngsters have spent a lot of their own money. How much, the doctor declined to say.

The babies' \$45,000 in bonds and cash has come from endorsements of various products they use—milk, tomato juice and the like—and motion picture and newspaper photograph contracts.

Over Ten Feet Long

British National History Museum Owns Heavy Tusks

London has become the possessor of the heaviest pair of elephant tusks in the world by a purchase announced recently by the trustees of the National History Museum. The tusks came from an old elephant killed in the Kilimanjaro district of East Africa. One was purchased as long ago as 1901 and the second is a recent acquisition. The respective weights of the tusks were about 236 pounds and 226 pounds when the elephant died, but these weights have been reduced by about 101 pounds owing to the ivory drying. The next heaviest known tusk is one of 198 pounds. Each of the tusks exceeds ten feet in length.

Strange Religious Sect

Members In Sweden Awaiting Arrival Of An Ark

A strange religious sect, whose members are awaiting "the arrival of an ark of gold and silver to convey them to the promised land," are under the scrutiny of the police in Sweden. Definite dates for the arrival of the "flying ark" have been set several times by A. Korpela, leader and prophet of the group. Eight members of the group have been committed to asylums. The police have ordered suspension of the meetings pending completion of the investigations.

The export trade of Canadian eggs from Maritime ports to Bermuda and the West Indies has increased during recent weeks and has created a favorable influence.

Little Journeys In Science

SALTS

(By Gordon H. Guest, M.A.)

When a base or an alkali is treated with an acid, the characteristic properties of each are destroyed or neutralized, a salt and water being produced. For example, if sodium hydroxide is treated with hydrochloric acid, sodium chloride or common salt and water are formed. A chemical reaction of this kind is known as neutralization, because the product (salt) does not have any effect upon indicators such as litmus. In other words, a water solution of common salt is neutral toward indicators. Hundreds of salts may be prepared by treating various bases with acids.

Salts are a large and very important class of compounds. Many salts are found in solution in sea-water and they make up a considerable portion of the earth's crust. Common salt or sodium chloride is the most abundant soluble salt, rock-salt sometimes occurring in deposits thousands of feet thick. Salt has been used by man for thousands of years for seasoning and preserving his food. It has been estimated that each person uses about twenty-nine pounds of salt per year.

The greatest known salt-deposits are at Stassfurt, in Germany. These deposits contain huge quantities of compounds of potassium, sodium, magnesium and calcium. One of the most valuable salts obtained from these mines is potassium chloride and it is estimated that the Stassfurt deposits yield about five million tons of crude potassium salts every year.

Nitre or saltpetre is a very important salt, the chemical name being potassium nitrate. This important salt occurs in nature, being especially abundant in certain parts of the Orient. It is now produced on a large scale from another salt called Chile saltpetre which is found in large quantities in Chile. Potassium nitrate is an important component of gunpowder.

Chile saltpetre, or sodium nitrate, is one of the most useful salts found in nature. It occurs in beds extending about two hundred and fifty miles along the West coast of South America. The average widths of the beds is over two miles, while the average depth is about five feet. The salt occurs in a rainless region, and is locally known as caliche. Over 55,000,000 tons of Chile saltpetre have been mined since the deposits were discovered early in the last century. It is of very great economic importance as it is a source of nitric acid which is used in manufacture of explosives. It is also an excellent fertilizer.

There are many other salts, some of which are of great economic importance. Calcium carbonate, which occurs as limestone, marble, chalk, and coral, has been of great service to man. When limestones are heated, they lose carbon dioxide, leaving lime and magnesia, which are compounds of great importance in industry.

Wall Street Well Guarded

Army Of Super-Efficient Men Protect Vaults Holding Millions

New York City has developed a standing army of 5,000 "super-efficient" men to guard the millions of pounds of money locked in the vaults of Wall street. All are deadly marksmen with six-shooters, machine guns, shot-guns, rifles, tear-gas bombs, and other weapons used in the modern war against gangsters. A large part of their lives is led in underground bivouacs, which are equipped with restaurants and sleeping quarters, target ranges, drilling grounds. There are 14,000 men and women in Wall Street holding pistol permits; but the vaults have other means of protection besides the guards. Some, when tampered with, are automatically flooded, while others throw off poison gases. One vault, it is said, has an arrangement to scald any intruder with hot steam.

Boys Build 'Plane

Make Four-Hour Flight In Government Inspected Machine

Three young Montrealsers landed in Quebec in their home-made aeroplane after a four-hour flight from Montreal.

The youths, Rodolphe Page, pilot, and Emile Pelletier and Bill Ritchie, hoped the flight would prove planes could be manufactured at a reasonable low cost.

On their arrival the young adventurers were jubilant at the success of their flight.

The plane was built by the boys in a private garage and first took to the air a few weeks ago. It is government inspected and equipped with a government license. The tanks, located in the wings, holds 30 gallons of gasoline.

Friendly To Britain

German war veterans and the general population favor friendship with Great Britain, 7,000 members and friends of the British Legion were told in a speech at London by Major Francis Fetherston Godley, leader of the group of British veterans which recently toured Germany.

Household Arts

PATTERN 5153.

"When cross stitch was in flower" long, long ago, the designs your grandmother worked were no lovelier than these prepared for you to-day. In this lovely bowl of flowers, the brilliancy of the poppies and larkspur can be faithfully reproduced in your embroidery. There are color markings on the pattern and that means you'll need no chart to follow—just go ahead and embroider. The crosses are 8 to the inch so you know your work will progress quickly. Make a lovely pillow top, picture, or tray inset of this design.

In pattern 5153 you will find a transfer pattern of the bowl of flowers 8 x 14 inches with color markings on the pattern; material requirements; a color key and color suggestions.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. They are met at the railway station by Columbine Nelson, who in turn introduces Mark and Matthew Adams, two neighbors of Aunt Columbine, and the party set out for Pine Ridge, which village causes dismay to both Nancy and Jack because of its dilapidated appearance and general look of poverty. Nancy and Jack are shown to the rooms they are to occupy, and both the young people consider the furniture and decorations hateful and, contrasting the present quarters with their luxurious home in Boston, wonder if they can endure the change for any length of time. Aunt Columbine tells why she wrote the letter to them, and relates some of her early experiences at Pine Ridge of hostile Indians and forest fires, of her father's hunt for gold, and of her mother's splendid spirit, but frail body, which could not endure the strain of pioneer life.

Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better.

Now Go On With The Story

CHAPTER XII.—Continued

"Dear useful Aunt Louise: A blizzard is raging and I can't see Pike's Peak from my tower, and have to hop up every five minutes to drop a log into the stove. I could write in the farm kitchen, but Aurora Tubbs would insist on talking, and I've simply got to get this down on paper. It came of my trying to find something to read this stormy morning. All Cousin Columbine has is Scott and Dickens—"

"I love Dickens, and Scott too," Phil interrupted. "I can read those when I visit Cousin Columbine. Go on, Aunt Lou."

"Your sister does not share your admiration of the classics," observed his aunt. She says: "... and they look so dull (especially Scott), and the volumes are so heavy that I gave it up. I asked Aurora if there was a library here, and she said nobody in Pine Ridge had time to read, though the drug store does a thriving business in the sort of magazines that make you shudder and look schoolma'am, Aunt Louise! Anyway, that gave me the idea. When I talked with Cousin Columbine she said that there was no Aladdin in Pine Ridge to rub his wonderful

lamp, you know, and wish for a library; and while I was thinking what I'd do to this awful place if I were Aladdin, I got an inspiration!"

"I think she's pretty slow getting to it in the letter," grumbled Phil.

"It happens to be in the next paragraph, sonny," said Aunt Louise, and went on reading: "It's this; and I'm rushing my letter so you'll have it before Christmas vacation. I want to start a library here, Aunt Lou. If I got the books, I'm sure I'd find a place to keep them. There's a schoolhouse here that isn't used now the children are carried to a county school in busses, which would be wonderful. I'd open the place two or three afternoons a week, and no matter what Aurora says, I'm sure the young people and old ones too, would be glad to take out books if they had the chance."

"And here's where you come in: Wouldn't each girl at school donate a volume or two if you told them about the scheme? And haven't you and Mother got a lot you'd like to get rid of? No matter if they're shabby. Juanita Tubbs will help me cover them with paper. I'm sure the Adams will give some too; and if you have any friends with books to part with, just grab them for my Aladdin library. That's what I'll call it if I can get somebody to paint a sign without being paid for the work. The Aladdin Library! Won't that look swell over the door?"

"I shan't say a word to any one until I hear from you, but do write soon or I'm likely to explode. With the exception of the Adam boys and Mary Taylor, the postmaster's daughter, this population looks as if it needed to be shaken up, and I'm sure a library will be a step in the right direction!"

Louise paused a moment, and then went on, a smile of amusement lighting her eyes: "Do not misunderstand, however. I have not become a missionary, or anything like that; but when you see people who have so little, it makes you think. Besides, I haven't enough to do. And Jack said Cousin Columbine wanted a slave! All the poor dear did want was to see some one belonging to her, before she died. And she's a long way from dying, if you ask me—the briskest (if there's no such word it doesn't matter) old lady I ever saw, and the most interesting."

"There's no time for more. The fire is almost out, and the wind is howling, and snow is sifting through the cracks in my tower windows. Cousin Columbine says it'll be dry as dust in a week, but I wonder. Love to every one at home, and do, do help!"

Louise laid down the letter, and looked up.

"What are you grinning for, Phil Nelson?"

"I was thinking that Nancy'd make a real swell missionary," said the little boy. "I've got a lot of old books that she can have, just as well as not; and maybe some of the kids at school have got some too. Do you s'pose if I got a lot of books for the Pine Ridge library, that Cousin Columbine would pay my fare to Colorado?"

Dad smiled, and said: "Some one will have to pay expressage on those books! But we'll manage that if we go without our Christmas dinner. I'm proud of our girl, thinking this up all by herself; and we've got to help her put it through. It's fortunate we stored the books out here, Margaret. We'll spend to-morrow going over them."

"And I'll pay the expressage," promised his sister. "It won't be necessary to go hungry Christmas day."

Phil drew a deep breath of relief. "That's the stuff! It'll be a funny enough Christmas anyway, with Jack and Nancy gone. What are you thinking about, Mother? You look awful solemn and far-away."

His mother started, pulling herself together and smiling a bit wistfully. "Do you know," she told her family in surprise, "I've been so busy I only just remembered that—that Nancy was to have made her debut to-night!"

CHAPTER XIII.

Two thousand miles away in Pine Ridge, Colorado, there had been no such forgetfulness. Nancy's first thought on waking was that this was to have been the day of her debut, perhaps because her eyes had fallen on a mammoth calendar (its "decoration" depicting a lovely couple seated beside a purple lake), which was Aurora's donation to what the girl had christened her "chamber of horrors!"

So this was the day she had looked forward to so long! Nancy snuggled down under the patch-work quilt and gave herself to the luxury of introspection. What thrills she and Mother had had over their plans!

ITCHING TORTURE Stopped Instantly

D. D. D. Prescription Speeds Relief

Even the most stubborn itching of eczema, pimples, mosquito or other insect bites, rashes and many other skin afflictions quickly yields to Dr. Dennis' pure, cooling, liquid, antiseptic D. D. D. Prescription. Forty years' world-wide success. Penetrates the skin, soothing and healing the inflamed tissues. No fuss—no muss. Clear, greaseless and stainless. It dries up almost immediately. Try D. D. D. Prescription now. Stops the most intense itching instantly. A 35c trial bottle, at any drug store, is guaranteed to prove it—or money back. D. D. D. is made by the owners of ITALIAN BALM.

How exciting to indulge in all those evening gowns! And what would be happening to her now if that miserable stock market hadn't crashed, and Dad crashed with it?

Nance glanced at her watch. It was seven o'clock—nine in Boston; and before long the flowers would have come pouring in: flowers from family friends, boy friends, girl friends too. She could almost see Aunt Judy's eyes shining with delight and pride as each fragrant tribute was brought in—dear Aunt Judy, who'd never done anything but look after other people! Mother would be a whirl of efficient excitement, enjoying every thrilling moment, and—

Oh, what was the use of these imaginings? Nance asked herself. Even if Dad accumulated another fortune there would be no debut for her; and the chances were against his doing that—at his age. Fifty-six! Nancy wondered how it would seem to be fifty-six—shuddered—and then realized that Dad didn't seem old at all, and often acted younger than she did! This was a cheering thought, and the girl kicked off her quilt and ran to close the windows.

At any rate, it was a glorious day, and all that snow had vanished, sinking into the ground and leaving everything quite dry again. Nance opened her door, to be greeted by the aroma of frying bacon. After all, the day might not be so bad. She was going to the Springs with Mrs. Adam (whom she had not yet met), to purchase the sport hose as well as some ten cent "jokes" for Christmas: something to make laughter at the dinner table, though Cousin Columbine assured that there would be laughter at the Adam dinner table, jokes or no jokes.

Nancy was late to breakfast. Cousin Columbine pretended to be provoked, but the girl grinned at her.

"I was too comfortable to move; and besides, I—well, I started day-dreaming!"

"About what?" asked the old lady crisply.

Nancy consumed two bites of muffin, and then said: "Of all sad words of tongue or pen, Cousin Columbine, 'the saddest are these—it might have been.' I'll admit I was pitying myself a little. This happens to be the day when Nancy Nelson expected to launch her bark on the—the social sea!"

She laughed, but it wasn't a natural laugh, and Cousin Columbine observed her gravely.

"Was giving up all that fuss and feathers a disappointment?"

"It was some jolt," said Nance. "Could I have two eggs, please? And what time did Mrs. Adam say she'd come?"

"At nine o'clock. I wish you'd run down to the store before you leave, Nancy, and get some baking powder. Aurora's going to make a cake."

"Do you want chocolate or coconut?" questioned Aurora, poking her head in at the door "If it's to be coconut, you'd better get another box; but considerin'—"

"Get the coconut anyway," broke in Miss Columbine, and motioned Aurora to go away. "I'm glad you're to have this trip to-day, child. You won't have time to be regretting what can't be helped. I want you to get a pretty scarf to give Eve Adam, something good, since we're going there for Christmas dinner. Eve never spends a penny on herself, and she likes nice things, and knows 'em too. That's all, except a book for John."

"You mean the old Adam?" asked Nancy, dimpling.

Cousin Columbine nodded.

"You'd better ask Eve what he'd like; and if you're through breakfast, go right down to the store now. Those Adam people are often ahead of time."

"You bring a couple o' pounds of powdered sugar," called Aurora as Nancy started off. "And" (as she reached the gate) "a cake o' chocolate."

When Nance returned laden with paper bags of various sizes, the Adam car was standing before the door; and as she laid her burdens on the kitchen table, Aurora said: "Well,

here you are! And Matthew Adam waiting six minutes. His mother couldn't go; and I hope to goodness that boy don't keep his mouth shut all the way. He's in the sittin' room with Miss Columbine right now. But if you was to ask me, his brother Mark would have give you a more exciting time."

Nance whirled about, laughing as she saw Matthew in the doorway. He said, apologetically: "I know, Aurora, but Mark couldn't be spared this morning. Don't kill yourself to hurry, Na-Nancy. I've got to put some water in the radiator. Just ta-take your time."

"Is Mrs. Adam sick?" questioned the girl as he went out.

"No, my dear," responded Cousin Columbine, "but Luke comes home to-morrow anyway, and Matthew had some errands he wished to do. Now run and get your things together, child; and don't hurry through your shopping for Matthew Adam or anybody else. If you're back by supper time it's soon enough."

Nancy was ready before Matt was; but Aurora stopped them, rushing from the kitchen as the engine roared.

"You get those woolen stockin's the first thing," she panted, "and then go right into a rest room and put 'em on. You see she does it, Matthew Adam."

"I-I'll do my best," Matt promised, his face crimson.

(To Be Continued)

Corner In Earthworms

Speculators Are Holding Back Supplies From Melbourne Zoo

A new form of "racket" has been started owing to the dietary of the quaint duckbilled platypus which has its home in the Melbourne zoo.

Not least among the queer features of this animal is its huge appetite for earthworms, of which it now consumes more than 800 per day, considerably more than its own weight.

The authorities of the zoo are now confronted with the fact that speculators in earthworms are holding back their supplies of the commodity and are asking 18 cents per dozen instead of 12 previously charged.

It is a question of who will "turn" first, the worm speculators, or the curator of the zoo.

Used Distress Money

Austria Resorted To Many Substitutes When Coins Disappeared

During the war and after the collapse of the Austrian Monarchy, when coins disappeared and were largely hoarded, many different kinds of paper notes, so-called "distress money," were issued by various towns, villages and provinces. In addition to primitive slips of paper, pieces of wood, parchment, leather, lacquer, and even porcelain were used as money. All these are on show at a remarkable exhibition at the Hagenbund Gallery at Vienna. The exhibition shows that not only societies, but also innkeepers, newspapers, and political parties issued money tokens.

Why Name Was Used

The bug collecting hobby of an English aeroplane builder, J. de Havilland, has made the name Moth known over the skyways of the world. As an entomologist, de Havilland specializes in the collection of moths—so the majority of his products are named after moths or some species of moth, such as Gypsy Moth, Puss Moth, Moth, Dragon, etc.

Garage But No Stable

Extensive plans for rebuilding the Royal Canadian Mounted Police headquarters at Winnipeg call for a 24-car garage. Nowhere in the proposed changes, approved by Ottawa, is there provision for stabling horses.

Sales of Diesel engines in Germany are increasing.

Paradise For Snakes

Six Species May Be Seen In One English District

If one wants to see snakes, he is advised to go to the clay-mining district north of Corfe Castle, in Dorsetshire. If there is a snakes' paradise in Britain, this is the place. There are six species of British reptiles, and representatives of all of them, including the rare smooth snake and sand lizard may be seen here. The other four species are the adder, the grass snake, the slow worm, and the common lizard. The adder is the only one of these reptiles that is poisonous and its bite is rarely fatal, though, naturally, medical attention should be obtained as quickly as possible if one is bitten. But it is not often that anyone is bitten, and this snake has been described as "dangerous only to toy dogs, stupid babies, and invalids."

Collections Show Increase

Figures For Federal Income Taxes Higher This Year

Canadians are dipping into their pockets to pay more and more federal income taxes, it was shown in figures released by the department of national revenue. In the 19 taxation districts, \$58,407,904 was collected in the first four months of the fiscal year, an increase of \$15,774,823 over 1934.

Only two districts, Quebec and Regina, showed decreases this year, Quebec a decrease of \$139,745 and Regina, \$1,301.

Editors Welcomed

Close to 200 editors and publishers attended the sixteenth annual convention of the Canadian Weekly Newspaper Association in Toronto. Delegates from all parts of Canada and Newfoundland, representing more than 100 weekly newspapers, were welcomed by Premier Mitchell F. Hepburn and Mayor James Simpson.

"John" is the most common Christian name among American vice-presidents.

There are approximately 67,000 tenement houses with 2,000,000 tenants, in New York City.

The principal drug plant grown in Egypt is henna.

Little Helps For This Week

"Ye are all the children of light, and the children of the day." These salonniers 5:5.

Serenity will be our days, and bright,
And happy will our nature be,
When love is our unerring light,
And joy its own security.
—Wordsworth.

Nothing can produce so great a serenity of life as a mind free from guilt, and kept untainted not only from actions but from purposes that are wicked. By this means the soul will not only be unpolluted, but not disturbed; the fountain will run clear and unsullied, and the streams that flow from it will be just and honest deeds, a brisk energy of spirit which makes a man an enthusiast in his joy. For as shrubs that are cut down with the morning dew on them do for a long time retain their fragrance, so the good actions of a wise man perfume his mind and leave a rich scent behind them. So that joy, as it were, is watered with these essences and owes its flourishing to them.

Place Was Transformed

Overseas Visitors Unaware They Were Received In Historic Room

Many of the guests at the Government garden party to overseas visitors at No. 10 Downing Street were quite unaware that when they were received by Mrs. Baldwin and Miss MacDonald it was in the Cabinet Room, states a London publication. This dignified but unpretentious room, the most famous in the British Empire, if not in the world, had been cleared of its usual furnishings and in particular of the big table at which so many fateful decisions have been taken. So unlike a meeting room it looked that one well-known overseas guest, as he left it, asked if it would be possible for him to have a look at the Cabinet Room. "But you have just come out of it," he was told. "Then let me go back and have a good look round it," he replied, and back he went.

The right arm of a man or woman is usually longer than the left.

There is an open air bath for the blind in Berlin.

What Other Papers Say

VISIONARY ADVICE

"The back to the land" movement is not all it is puffed up to be" comments the Leader at Cloverdale, suggesting caustically: "Whenever the city writers and thinkers are at a loss to know what to do with the unemployed, their thoughts immediately turn to the possibilities of farming, and knowing not the slightest thing about it beyond the fairy tales that are published from time to time, they jump to the conclusion that anyone can go on the land and make a fortune in short order. It never seems to strike them that a few acres of stumps and gravel can not support anyone, neither do they stay to consider that even under the best conditions crops must be produced before they can be marketed. Their pipe dreams do not present to them the difficulty of finding a market, and the fact that the farmers often find themselves producing below cost has no bearing at all on their very definite decision that their "back-to-the-land" program is the one and only panacea for all evils of the destitute. It is hard to picture a more desperate plight than that of a family man, who, misguided by the publicity given the land, finds himself on some out-of-the-way five acres of stumps, without a home and with little or no capital to do anything with....."

LIVING FOR HERSELF

"There is one very definite way of escape from the everydayness of things and that is frankly to go off and leave it. One day not long ago a certain woman of Puget Sound did just that. She stayed on the job till she brought up her family and then calmly decided to start living for herself awhile.

Having no money at all, "Run-away Lady" took her youngest daughter, fifteen, and ran to the Olympic Peninsula, where she remembered an old empty church located not far from prosperous farms where she might find work.

Here she lives in primitive fashion, picking berries and doing the hardest kind of work for her food, and between times writing the hours away beside her campfire in the brake.

Many will censure her, many envy her courage. But all will be interested to see how long she will stick; whether she will get somewhere with her writing after long thwarted years and what will happen to the young daughter. And most of us will envy her those campfire evenings of splendid loneliness, the fir trees towering above the little church, the sense of hiding there so close to the earth, dependent upon herself alone. Every artistic instinct in one's being does all it can eternally to destroy this complicated uncivilization we have set up around us, and when somebody does actually break loose and revert, sets up a great hue and cry of its own, too."—Puget Sounder.

A PRACTICAL TRUTH

"Place any man behind a governmental desk and give him a few million dollars of government money to spend and he is likely to develop the fixation that any one who does not approve of the way he does his job is a public enemy" observes the president of Williams College.

Which observation is another indication that practical truths dawn finally upon college presidents. Meek and lowly taxpayers realized these and other human assertions of governmental officialdom long years before Aristotle, and in this day, age and province its unpleasantness is more apparent than ever before.

NEWSPAPER BALDERDASH

"So many varying tales come from Russia as to conditions there, from eye witnesses and otherwise, that it is difficult to judge what is the truth and what isn't. At any rate, the Mt. Pleasant News has run down one story published in the Province, which it claims to be a direct perversion. Its comment on the published article is as follows:

"Readers of the Daily Province will remember a despatch that appeared in its columns some few weeks ago.

If you wish to be fair...

PRINTERS in the Fraser Valley are endeavoring to meet from nearby cities a class of competition which destroys business—less-than-cost prices—which, like the scabbing in other lines of work, breaks down the workers' livelihood. If the farmer, mechanic and small business man cannot get a living for his family, what happens?

Forced out of employment by automatic machinery, certain Vancouver journeymen printers have got use of idle presses and type, taken their children from school and set up in business under sweatshop conditions, pricing work at bare cost of paper, for what?—sacrifice themselves, like many others, at the altar of "unforced overhead"—and drag down other small printers with them.

Hardware, grocery, automobile and other lines have organized against this eruption of Bad Business. Established printers are desperately endeavoring to do so.

Proximity to Coast cities has always made The News subject to this class of competition. Some of it the local shop can't meet. Most of it it CAN AND DOES meet. This has been our offer in the past; we reiterate it—

15% Discount upon every class of ordinary job printing from the trade list of any western city or town in Canada, Winnipeg west. This price applies, and has applied only to "local" work—printing used locally—work which the home shop needs and must have in order to carry on.

If you want to be fair, this is a fair

Local Poultry in Running for National Championships

A profitable market for his pedigree S. C. White Leghorn poultry was found in U.S. this season by F. C. Evans. "Eggs prices were never lower than 20c over there, when they went down to 14 cents here" Mr. Evans said, expressing his relief that the B.C. egg market is now recovering.

The Evans' contest birds have now good chances to win first place in two national events. His pens held second place in Ottawa (All-Canada) contest, being but 12 points behind the leader, and improving rapidly. Evans pens stand second in the Agassiz contest at present, third in the Lethbridge contest and fifth at Sidney, V.I.

Mr. and Mrs. Steeves of Vancouver are visiting Mrs. Steeves' parents, Mr. and Mrs. G. F. West. Mr. Steeves, who is a member of the Royal Bank of Canada staff in Vancouver, is on his vacation.

Mr. D. Rooney, who is working in a mill at Port Moody, injured his foot last week.

Mrs. P. Gourand of Vancouver visited Mrs. M. A. Moret over the weekend.

The article in question contained some very lurid and sensational descriptions—unfavorable in character—of conditions in Russia as observed by the writer, a man named Thomas Walker.

We pointed out at the time that Walker was a Hearst man and his despatch has appeared in the Seattle Post-Intelligencer (a Hearst paper) on the day previous to its appearance in the Province. In view of Hearst's well-known anti-Russian prejudices, we felt that the article should not be taken too seriously, and so we stated.

Confirmation of our suspicions came shortly afterwards. The article came under the scrutiny of competent observers who found it full of the most glaring inaccuracies and exaggerations. The photographs which accompanied it in the P-I were proved to be fakes and by checking Walker's pass-port it was discovered that while in Russia he had not been within hundreds of miles of the scenes and incidents he "saw" and "described" as an "eye-witness."

Although this information was equally available to the Province, no explanation or retraction of Walker's perjuries has so far appeared in its columns. We are left to assume in the first place that the article was printed by the Province in good faith, and in the second place that it remains in ignorance to this very day of the fact that it misled its readers sadly; which, if we may say so, is a very considerable assumption.

But there are still more recent developments which the Province should not pass unnoticed. Walker recently returned to the United States and among those on hand to welcome him on his arrival were some officers of the law armed with a warrant for his arrest. In the proceedings which followed it became public knowledge that this erstwhile globe-girder was none other than Robert Green, sentenced for forgery in 1919 to the Colorado State Prison. The name Walker, for purposes of his own, had been assumed. Walker, or to give him his legal name, Green, had spent but two years of his sentence when he made a successful get-away. Previous to his conviction in Colorado, he had served a year in Texas for a violation of the Mann Act.

The above information we pass on gladly to the Province with all the satisfaction that accompanies a good deed well done. As to the use which the Province will make of it, we are not, at the moment, in a position to speak."—Richmond Review.

The Labor Day dance in Matsqui hall—the only holiday attraction that was held in the district—attracted a large crowd, who spent an enjoyable evening.

"I'm Ready for emergencies ...I have a telephone

"I'm not a fellow who is always looking for trouble, but I believe in being prepared for emergencies." Tom Treddler was telling a friend.

"That's one of the reasons why I have a telephone in my home. I know that in case of burglary, fire, accident or sudden illness, a telephone call will bring help in a hurry."

Messrs. Little and Bukor made a trip to Revelstoke last week, the latter remaining there to work.

ABBOTSFORD

Mr. and Mrs. H. J. Murphy, former residents of Dawson Creek, Peace River district, have taken over the Springgay place, McKenzie road.

Miss Dorothy Morrison has returned from a year's visit in New York, and with her mother, is guest of her uncle and aunt, Mr. and Mrs. A. W. Webb.

Clergy of the Rural Deanery of Yale are meeting in Abbotsford next Tuesday and Wednesday, preacher on the first evening to be Rev. B. V. Reddish, M.A., B.D. of Vancouver. Patronal festival and 26th anniversary of consecration will be celebrated in St. Matthew's on Sept. 20, and the harvest festival on Sunday, Sept. 22.

Mrs. Calder and Mrs. Williams, Gladwin road, are visiting relatives in Regina, Sask.

P. Biro, operating a barber shop in Abbotsford, has purchased a house on Yale road west of Abbotsford, formerly occupied by Mr. and Mrs. R. Ross.

Mr. J. Lawrence of Vancouver is in charge of Daly's dry goods store during Miss Bayne's absence.

The Rev. and Mrs. E. R. Scratch arrived in Abbotsford on Friday to resume their ministry at the Pentecostal Tabernacle. Mr. Scratch has recovered from his recent accident.

Mrs. J. MacDonald and children of Vancouver returned on Sunday to their home following a week's holiday spent with Mrs. MacDonald's parents, Mr. and Mrs. E. Bailey.

Mr. Harry Grant and son and daughter of Vancouver visited the former's aunt, Mrs. Buker, on Tuesday.

Mrs. Zeigler of Vancouver is visiting Mr. Alec Thompson and renewing old acquaintances in Abbotsford.

Mr. and Mrs. H. Henderson and friends visited in Seattle at the weekend.

Miss Eleanor Finch has returned to her teaching duties near Ponoka, Alberta.

Mrs. E. C. Munro of Calgary is visiting her sister, Mrs. Finch.

Miss Jean DesMazes and Agnes Van Kasteren left yesterday to attend school in New Westminster.

Albert J. Beard, formerly of Abbotsford, and now a resident of Vancouver, has enlisted in the Canadian Air Force as a radio operator, and will be billeted at Camp Borden, Ontario.

Mrs. Bedlow and daughter Olive of Vancouver, formerly of Abbotsford, were guests of Mr. and Mrs. Wm. Mitchell last week.

Abbotsford softball team lost a tight game at Chilliwack on Wednesday evening when they met the Legion team of Chilliwack. Final score was 5-4 for the Legionnaires, who turned out to be a heavy-hitting squad, booming out two homers.

A party, in observation of R. Carlson's twenty-second birthday anniversary, was held in a Mission tea-room on Friday evening.

Miss Frances Scott of Vancouver was the guest of Miss Hazel Buck last week.

Miss Betty Irvine has returned home from a vacation spent in Vancouver.

Visitors at the home of Mr. and Mrs. Lamont over the holiday were Mr. and Mrs. Haines and family of Seattle, Mr. and Mrs. Angus Campbell of San Francisco, and Mrs. F. Shack of Vancouver.

CLEARING LOG DEBRIS FROM VEDDER RIVER FLATS

Snags and log obstructions in the Vedder river channel from the Crossing to Yarrow are being taken out by a crew of 10 men employed by the provincial public works department. Piles of the log debris are anchored at curves of the river, where there is a tendency to cut new and threatening channels.

FIRE! FIRE!

It blazed in a second and the fire burnt everything he owned. And he was not insured.

SUMAS DISTRICT

Mr. Oppenheimer, New York hop buyer, was a caller at the Canadian Hop Co. gardens last week. The U.S. market is so glutted with hops, and the price so low (4c - 7c lb), he intimated that his firm was persuading a large percentage of growers under contract to leave their crop on the vines, thus saving harvesting costs.

Favored by ideal weather, harvesting rapidly nears completion in the district, with fairly good yields reported everywhere. On Sumas, several baling and threshing outfits have been busy with oats and peas, and local truckdrivers have found employment hauling the products to New Westminster.

The warm winds of early last week brought rapid maturity to the Sumas prairie hops, and picking forces were greatly increased in order to gather the blooms at their full ripeness.

Almost 3,000 pickers are busy on the Canadian Hop Growers vines, about 360 of these coming from the Abbotsford, Peardonville and Poplar districts.

It is stated that the rapid ripening of the vines considerably improves their flavor.

A stucco residence is being erected on Vye road east for Mr. and Mrs. E. Wakefield, who recently arrived from Smithers. Their farm is near that of Reeve Hougden's. The structure, being built by Rural Contractors, is to be of stucco finish.

The funeral of the late William Kennedy, held from Trinity United church to Hazelwood cemetery last Thursday, was very largely attended. Pall-bearers were M. J. Nelles, W. Moore, F. Nelles, W. Groat, A. Munro and J. McDonald. Rev. Mr. McTurk of Sardis officiated.

Next week the Broder Co. corn cannery at Chilliwack is expected to open to handle the crop of more than 100 Valley farmers under contract. Cannery operation, it is expected, will last six weeks and give employment to 100 hands.

Nut-culture is becoming a profitable sideline for Whatcom County farmers, it is noted, hazel-nuts offering possibilities of profit equal to walnuts and chestnuts. Among 45 interested visitors to five farms in the Sumas district last week were several B. C. growers.

Seasonal operation of Bellingham's sugar-beet factory will last 45 or 50 days this year, the factory management anticipates. Last year the plant operated but 18 days, employing 200 persons.

Mrs. Yarwood, Huntingdon, is remodelling her home.

Miss Elinor Blatchford has returned from a vacation in Alaska and resumed her duties as principal of the Huntingdon school yesterday.

Fire escapes are being built at two ends of Huntingdon school.

Mt. Baker highway was completely cleared to the summit last week, local motorists reported, and traffic is now at its peak. Trails to the various lakes and lookout points are all open, and the blueberries are ripe.

Nature Upsets Man's Plans

Harvest time in Western Canada has again arrived and for the next few weeks great activity, from early morning till late at night, will be the rule right across these western plains. Following several years of short crops, and in many sections complete failure of crops due to drought, and consequently lack of resources on the part of tens of thousands of farmers to seed and harvest a crop this year, governments and municipalities, banks, mortgage, loan and implement companies made provision whereby farmers were supplied with feed, fodder, seed, gas and oil, machinery repairs, binder twine, and other essentials to the seeding and harvesting of a crop. Each individual farmer may not have received all that he desired, but, speaking broadly, the needs of the situation were fairly well met.

Taking the country as a whole, and excepting certain more or less restricted areas, copious rains have fallen throughout the growing season, following a somewhat late seeding. Up to a few weeks ago prospects for at least a normal, if not above normal crop, were bright. Grasshoppers and cut worms which were at first threatened, seemed to have been brought under control, weather conditions prevailing being a main factor to that end. Prospects for a fairly large and satisfactory crop were excellent, and estimates of as high as 350,000,000 to 400,000,000 bushels of wheat were commonly made.

But last month the bright picture became clouded as rust made its appearance in the wheat fields, coming in from the southeast and spreading rapidly westward and northward. Governments, financial concerns, economic planners, farmers, every human agency is powerless against this development of Nature. For years technical agricultural experts, chemists and scientists employed by Governments have been seeking a means to offset the ravages of rust and to develop a strain of wheat that will be rust-resistant. But Nature this year has defied all their efforts, and it is now self-evident that Western farmers will sustain heavy losses through the effect of rusted crops.

Estimates of the loss through rust already run as high as 100,000,000 bushels of wheat; some estimates are even higher, and, of course, the actual loss will not be known until the harvest is completed. On many farms, even in some municipalities, no wheat will be harvested.

There is no desire to be alarmist in reviewing this situation. Notwithstanding the inroads by rust upon what a few weeks ago was one of the most promising crops in many years, the general agricultural situation is decidedly better than for some years past. Grass again covers great areas of the West which recently presented a desert-like appearance. Feed and fodder formerly lacking is now available. Garden crops are generally reported to be good. But the big cash crop of the West, wheat, will be smaller and of decidedly less value than was hoped for and expected a few weeks ago.

The whole country must face this unfortunate fact and meet it to the best of its ability. No human agency can be held responsible for the losses sustained. It was beyond Governments, corporations, and individuals alike to prevent. All will be included in the losses sustained—Governments through loss of revenues and the necessity of providing assistance where it was not anticipated it would be necessary; railways through loss of traffic and therefore loss of revenues; railway, elevator, machine company and other employees, including farm laborers, through less employment; financial concerns to whom money for advances made is owing but which cannot be paid as fully as was anticipated; farmers more especially because the returns for their year's labor are swept away or very largely reduced. In a word, no existing political, financial, economic, or social system is responsible for the heavy losses the country is sustaining. Nature and conditions developed under its inscrutable laws are the sole cause.

But Nature is not always unkind. In the long run it always strikes a fair balance. Its laws operate not for one year, but throughout cycles of years. Man must not only recognize this truth, but govern himself accordingly. There is no good end to be served by becoming despondent and discouraged. There is only one courageous thing to do, and that is to face the situation and the problems presented. Losses to-day will be compensated for by gains to-morrow. That is a law of Nature. Therefore, the future should be faced with courage and determination. Life is a battle and must be fought. Man could not exist on "flowery beds of ease." If he is to succeed and reach the topmost rungs of the ladder of life, he must exert himself and climb, battling against all obstructions in his way, eradicating the weeds that cling and clog his steps, removing weaknesses and strengthening the ladder. Climbing he will become stronger; crouching at the foot of the ladder, waiting for somebody to carry him up, he will become flabby and weak and eventually succumb. Courage and determination, which will bring confidence, is essential to success in any walk of life. And in the long run Nature will not bar the way, rather it will be found helpful and co-operating.

Wood Ready For Use

Germany Has Treatment To Season Trees While Growing

Telegraph poles, railway ties and other heavy wood necessities may be grown to order by a treatment which has just been discovered in Germany. Trees are made to season themselves so that when felled their wood is ready for immediate use. A bore hole is made in the tree trunk, and a special chemical solution containing arsenic and other salts is injected into the living tree. These chemicals enter the sap stream of the tree, and are gradually carried to the ends of the highest branches. The tree does not survive the treatment very long, but as it dies it becomes thoroughly saturated with preservative and can be used on railroads or for telegraphs and telephones without any of the usual treatment.

Serves Double Purpose

Balloon Which Turns Into Parachute Tested Near Moscow

A "parachute balloon," designed to change its form in the air and to descend as a parachute, has made its first experimental flight from the field of the government dirigible factory near Moscow. The pilots, Modestoff and Lisoff, were ordered to ascend 10,000 feet, then to open the valve, permitting the gas to escape. The underpart of the bag is designed to fold upward in such a manner the bag gradually takes the form of a parachute.

Keep cast-iron work in good condition by rubbing with blacklead.

Beer was made by the Egyptians 5,000 years ago.

Trying For New Record

Speed Of 300 M.P.H. Is Sir Malcolm Campbell's Aim

A circus of record breaking under the boiling sun on Utah's salt desert, planned as the greatest show in the history of automobile speed racing, is the September aim of Sir Malcolm Campbell and Captain George Eyston, Britain's swiftest drivers.

The speed kings announced their plans—to sail together, Sir Malcolm to shoot again at his dream of 300 miles an hour in the veteran Bluebird; Eyston to tackle every mark between that one and 24 hours.

Filled with glowing accounts of the Bonneville salt flats surface by his friend, John Cobb, who recently set 21 new records there, Campbell is confident that old Lady Bluebird, the six-ton thunder wagon that roared to the present land speed record of 276.816 on the sands of Daytona Beach last winter, finally will carry him this time over a mile in 12 seconds flat—300 miles an hour.

"I'm sure I'll beat 300 this time," Campbell said. "Then I'll chuck racing and stick to business."

The 50-year-old Englishman who has no challenger to-day for speed over a measured mile has made a few alterations in the Bluebird since his return from Florida.

Captain Eyston, who in the past nine years has set 200 records, more than any other living man, will alternate record tries with Campbell. Eyston will drive a fearsome looking front-drive juggernaut, powered with a 400-horsepower Rolls Royce aviation engine. Its tanks carry 46 gallons of gasoline, giving it a 500-mile range without refueling. Eyston believes he can average 160 miles an hour or higher for 24 hours and is bringing Albert Denly along to drive relief.

Fingerprints By Radio

Experiments Have Shown Great Improvement In Results Obtained

Transmission of fingerprints by radio is the latest link between science and criminal detection—a link that is being more strongly forged by Scotland Yard every day.

Experiments were begun several months ago. Although not yet regarded as an every day practical business, considerable improvement has recently been made in the results obtained.

At first the images were blurred, even when sent from enlarged prints, but greater technical experience is gradually overcoming this drawback.

The time is very near when in urgent cases, portable apparatus will be used to transmit fingerprints direct from the scene of the crime to Scotland Yard records, it was predicted.

As the technique of wired and radio transmission improves, it will be possible to send life-size fingerprint photographs speedily over any distance, police believe. Scotland Yard rapidly turns new scientific inventions to its own use in the fight against criminals. The present head of the famed investigating department, Lord Trenchard, has had much to do with the reorganization plans.

Demand For Homespun

Women In Quebec Are Kept Busy Filling Orders

Spinning wheels and hand looms in the district around Murray Bay, Quebec, are kept busy as the housewives try to fill demands of the fashionable world for homespun fabrics.

For years Murray Bay has been famous as the home of homespun. Its fine, soft blankets and candlewick spreads have been carried away by tourists to far parts of Canada, the United States and Europe. This year there are still the blankets, spreads and hooked rugs, but the rage is for homespun fabrics, from which suits and skirts, sport jackets and coats are being made.

Much of the charm of the new fabrics is in their natural coloring and weave. Colors are from natural vegetable dyes, the habitant women making the fabrics from beginning to end.

Though women are doing most of the buying of habitant homespuns, men are also using them for sports wear.

Making Progress

"Son," wrote a busy father, "emulate Benjamin Franklin, who said, 'To learn the value of money, borrow it!'"

In due time the boy at college replied: "Dear Dad, I did as you suggested. Borrowed \$50 from my roommate. What do I do next?"

More than two dozen species of orchids grow wild in the regions around Chicago.

Power Of Sun Rays

Amount Of Sunburn In Sunlight Measured By Machine

Government scientists of the United States have successfully tested a machine which measures the amount of sunburn in sunlight.

Dr. W. W. Coblentz, internationally famous radiation expert of the National Bureau of Standards, has perfected the machine which measures the ultraviolet rays of sunlight which cause sunburn and tanning. The machine is known technically as a portable prevision ultraviolet ray meter.

Ultraviolet rays comprise less than a thousandth of the total radiation coming from the sun, Dr. Coblentz said. Yet these particular rays are strong enough to scorch the skin with only several hours exposure during the summer months. The rays also are used in treating rickets.

Tests have been made at Washington and San Juan, Puerto Rico. Both are approximately at sea level and relatively free from smoke and dust. Dr. Coblentz pointed out that altitude and flying particles were factors in measuring solar radiation.

The "tanning" rays were somewhat stronger at San Juan than in Washington at the same comparative altitudes. This conforms with other radiation studies made in the tropics which show that the sun, being directly overhead, has to send its light through less ozone in the stratosphere. Experts estimate that the sunlight reaching Washington has to travel through approximately five per cent. more atmosphere than at San Juan, thus absorbing more ultraviolet rays.

Other tests performed at Flagstaff, Ariz., showed less ozone in the afternoon than in the morning and thereafter a greater atmospheric transparency. Autumn was found to be more transparent there than the spring, experts found.

Fog takes its share of the ultraviolet rays out of the sunlight and there is less possibility of tanning when humidity is high, it was found.

Physicians are interested in the device because of the curative power of ultraviolet rays in cases of rickets, which is practically unknown in the tropics.

The present machine screens out the ultraviolet or "tanning" rays in the sunlight and measures them quantitatively with the aid of a photo-electric cell.

Sees Market In Britain

Opportunity For Export Of Tuberculin-Free Cattle From Canada

Prevalence of bovine tuberculosis in Great Britain provides a great opportunity for Canadian cattle-breeders to develop a large market for tuberculin-free cattle, Dr. Arbour Stephens, member of the British Medical Association touring party, said at Toronto before entraining for Winnipeg. Dr. Stephens is an alderman of Swansea, South Wales.

"Sixty per cent. of cattle in Great Britain show tuberculin in tests," Dr. Stephens stated. "Canada's development in recent years has shown this can be reduced. For this reason and because opinion in Great Britain is strongly in favor of tuberculin-free herds, I believe a wonderful opportunity exists to benefit both Canadian cattle-breeders and the British people."

A Modern Samson

Native Of India Earns Nickname With His Feats

N. K. Modi of Dumka, Bihar, India, has earned for himself—with good reason—the nickname of "Samson." Here are some of the feats he has recently accomplished:

Killed a tiger single-handed, armed only with a stick;

Killed a buffalo by twisting its horns till its neck broke;

Put to flight, by himself, a gang of 40 bandits. Saved the life of his servant, who fell down a well. He was just in time to catch the man's left ankle with one hand as he disappeared over the edge, and he hauled him back with ease into safety.

Surplus Dairy Nations

New Zealand, Australia, Denmark, Netherlands, Canada, Italy, and Switzerland appear to be the world surplus dairy nations. The United Kingdom is the world market, supplemented by Germany in the case of butter, by the United States, Germany, and Belgium in cheese, and by a number of nations in condensed and evaporated milk.

The human eye responds to wave lengths of light from those 167 ten-millionths of an inch long, which give a sensation of violet, to those 266 ten-millionths of an inch long, which gives a sensation of red.

Chantecler CIGARETTE PAPERS

FASHION FANCIES

RAGLAN SLEEVED SWAGGER COAT FOR SMART ALL-OCCASION DAYTIME WEAR

By Ellen Worth

Here's a simple to sew swagger coat that finds an important place in every smart wardrobe.

To-day's pattern also provides for seven-eighths length as seen in the small back view.

Lightweight wool in vivid colouring as emerald green, red, purple, etc., is very smart over dark sheer frocks.

White, navy, or pastel linens are enchantingly lovely for town or resort wear.

It's made at a very moderate cost. Style No. 312 is designed for sizes 14, 16, 18 and 20 years. Size 16 requires 2½ yards of 54-inch material with 2½ yards of 39-inch lining.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

Summer Fashion Book contains many more smart, cool vacation clothes. Send for your copy to-day, the price is 15 cents.

Will Await Conference

Britain Has Not Yet Decided On Naval Program

Sir Bolton Eyres-Monsell, first lord of the admiralty, told the House of Commons Britain's naval building program could not be determined "until the results of a naval conference and programs of other powers are known."

Referring specifically to a published report that Britain plans to build a new \$750,000,000 battle fleet by 1942, he said: "No attention need be paid to unofficial and irresponsible statements."

Britain, he added, has advanced a hypothetical program to the United States, Germany, France and others.

Honey As A Healer

Dr. N. Zaiss, a leading physician in Vienna, Austria, says honey is the best healer of wounds and superior to all ointments. He has treated several thousand cases with honey, and has not had a single failure. It soothes pain, hastens healing and acts as an antiseptic, he declares. It is also highly effective with burns and carbuncles.

Rattlesnakes add from two to three "rattles" annually, and sometimes four.

Four hundred years are required by nature to build one inch of top soil, according to recent estimates.

The King's Reach

Section Of Thames Named In Honor Of Jubilee

The river Thames, so far as it runs through the metropolitan district of London, is divided into a series of sections called "reaches." There is Chelsea Reach, Blackwall Reach, Greenwich Reach, Gallions Reach and so on, but one section appeared to have escaped being named, a deficiency which has just been rectified in honor of the King's silver jubilee. This is the stretch between the Pool of London, so familiar in pictures, just west of the Tower Bridge, and Lambeth Reach, which terminates on the Houses of Parliament side of Westminster Bridge. The Port of London Authority has decided to call it "The King's Reach."

Once upon a time the Thames was more used as the King's Highway than the road itself between Westminster and the Tower of London, the royal residence, St. James Palace being at one end while His Majesty often had business at the Tower—sometimes very dirty business at that. So that "The King's Reach" is an appropriate name for this important waterway. It includes London Bridge, Southwark Bridge, Blackfriars Bridge, Waterloo Bridge to Westminster, and on the shoreline are such noted places as Billingsgate Fish Market, Cannon street railway station, St. Paul's Cathedral, Victoria Embankment, including Cleopatra's Needle, Somerset House, where wills are filed and all the births, deaths and marriages in England are registered, Charing Cross and Scotland Yard.

So if you should happen to be in Old London and lean over the parapet somewhere between the Houses of Parliament and the Tower looking at what John Burns calls "liquid history," that part is "The King's Reach."—St. Thomas Times-Journal.

Gave Address On Slang

Professor Of English Says It Is Language On Trial

At the spring meeting of Yorkshire Dialect Society held at Wilberforce House, J. H. Gratton, Professor of English language and philology in Liverpool University gave an address on slang, cant, and jargon. He said it was impossible to acquire a thorough knowledge of English without being familiar with slang and vulgarisms. Slang was language on trial, but no word or expression had any real meaning outside its context and the situation in which it occurred. Cant was originally the secret language of the underworld, and he defined jargon as language unintelligible out of its proper sphere. Consideration would show the absurdity of condemning slang unheard. Attempts had been made to classify it according to occupations. What we really wanted was more knowledge about the passing of sectional slang into general slang. Words which were started as slang had risen in value and become an essential part of our colloquial of literary vocabulary.

New Tower Telescope

A new solar tower telescope, the first of its kind in England and the only large astronomical telescope in the world with optical parts made entirely of fused quartz, has been commissioned at the observatory in Oxford, England.

The liver in a human body is about seven times as large as necessary for the work the organ does.

Three Hundred Years Ago Canada Was Literally A One-Horse Country

Nearly three hundred years ago, Canada was, in point of truth, a one-horse country, writes Allan Strathglass in the Farmer's Advocate. A one-horse country it remained for eighteen years. For although the North American Continent had been the pre-historic home of the delightful little ancestor of old Dobbin called the Eohippus, prior to 1647 no horse had ever trod the turf of that strip of land along the St. Lawrence, which was the nucleus of this great Dominion.

Champlain, the founder of Quebec, in 1608 did bring over cattle from Normandy for the use of the farmers or habitants of his new colony, but the "Father of New France" had been dead twelve years before a horse came to Canada.

This historic animal, whose name, alas, has not been handed down to posterity, arrived in Canada at Tadoussac on June 20, 1647, and he or she immediately passed out of circulation as far as the farmers were concerned, for those worthy men presented the animal to the Governor, M. de Montmagny. No brethren or sisters of Montmagny's steed made their appearance for eighteen years.

In 1665, however, twelve more were imported. Further consignments, sent out by Louis XIV. of France, arrived in 1667 and 1670. These latter were presented to the farmers on condition that the new owners feed them for three years, and in case of loss of an animal through carelessness the owner should pay 200 livres to the King's Receiver. It was a stiff price to pay for a horse, for 200 livres at that time would correspond to \$1,000 or more to-day.

Naturally the Habitant took good care of his horses. He also set out to acquire more, and so went in enthusiastically for horse breeding. According to one historian the twelve horses imported in 1665 had produced 145 in 1679, two hundred and eighteen in 1688, and by 1698 some 684. As a matter of fact the breeding of horses was carried to such an extent that in 1709 the government attempted to curb it. Horses were becoming too numerous. In that year the government issued an order forbidding the habitants of the district of Montreal to keep more than two horses or mares and one foal on each farm. In 1757 the troops in Quebec were fed horse flesh.

The French Canadian horse of the 17th century won a high reputation, and for 150 years was considered the best horse in Canada. But the good repute was responsible for its almost total disappearance, for all the best stallions were constantly bought up by Americans, who took them across the line.

If Canada's horses were in great demand on account of their good points, the same cannot be said of one other of the early farm animals imported to Canada, namely, the pig. The early pig did not possess many good points, although he showed plenty of angles. For he was a skinny beast, slow to fatten. This pig was of no particular breed. He was just pig, and a long-legged one at that. He had a narrow back, a very long head, and a long, thin neck completed his streamline proportions. For 200 years this coarse type imported from France was the only kind raised by Quebec farmers. About 1835, however, the Berkshire was introduced in the neighborhood of Montreal, and later, all the other well-known breeds were brought into the country.

Cattle were imported to New France thirty-nine years before Montmagny's horse, by Champlain in 1608. These cattle were obtained, it is believed, from Normandy. The number first brought over is not definitely known, but it could not have been great as the ship was very small, and the voyage itself must have taken its toll of the cattle. This trip from Honfleur to Quebec took nearly three months—from April 13 to July 3, 1608.

The French Canadian cattle, known to many as "Quebec Jerseys," that graze on the farm lands of Quebec province to-day, are descendants of those brought here by Champlain. Of course, the other well-known breeds have been imported in modern times.

Horses, pigs and cattle were but a few of the domestic animals the pioneers of Canada introduced to Canadian farms. The Abbe Nicholas Boucher, writing in 1663, stated that there had been brought from France by that date oxen and cows, pigs,

sheep, dogs, cats, rats (to feed the cats?), hens, turkeys and pigeons.

And so, as a result of the enterprise of the founders of Canada, the first farmers laid the foundation of the livestock industry and suggested the means whereby fertility of farm lands might be maintained even through three centuries of tillage.

A Mathematical Wonder

French Girl Says She Reads Figures From Mental Record

The Metaphysical Institute of Paris has just announced after extensive tests that it has discovered the most accurate mathematical memory on record in the brain of a girl of 22 named Mlle. Osaka.

Mlle. Osaka can raise a number to its tenth power by mental arithmetic, and can extract the root of a number of the same power in less than a minute. Twenty persons may each give her orally a number running into billions or trillions, and after she has heard them all, she will repeat, in any order desired, their numbers. If you would like to know the number of days, hours, minutes and seconds you have lived, give her the date of your birth, and she will tell you almost instantaneously, with due allowance for leap years.

If you read off 48 figures at the rate of two a second to Mlle. Osaka, she will repeat them after you without error. Inaudi, known as the Paganini of Figures, was able to remember 42. The average person can retain seven.

Mlle. Osaka explains that she sees the figures she is working with in her mind as if they were written on a blackboard, and to reproduce them she has only to read from that mental record.

Easily Imposed On

Many People Are Quite Ready To Believe Rumors

The easy credulity of people in regard to a man of mystery and romance is nothing new or unprecedented in the world. In fact, such rumors and beliefs are about as old as history itself. There are many people to-day, for example, who believe Lord Kitchener is alive and that he did not go down with the ill-fated Hampshire. Jesse James still rode in the imaginations of many thousands long after he was dead and buried, to choose an instance from the opposite extreme of human experience. Since Charlie Ross disappeared in Philadelphia's suburbs many years ago there have been hundreds of rumors that he was alive, and only two or three months ago a claimant to the name appeared. For many years people believed in the United States that John Wilkes Booth was alive, and so the story might go on and on. All that is mortal of the remarkable man known as T. E. Lawrence lies buried in England, but for many, many years to come his amazing life will be the subject of rumor and legend. —Memphis Commercial Appeal.

Once Belonged To King

Telescope Has Been Loaned To Observatory For Boys

The boys of Minchenden School in London have been provided with a telescope which once belonged to the King, and it is to go into the new observatory the boys themselves are making under the direction of their science master. Seventy of them belong to the school astronomical society, and they hope to collect useful information for the British Astronomical Association, which has lent them the telescope.

In Memoriam

A Yorkshireman was showing an American round London. They came to a busy corner and were watching the traffic.

The American said: "This is nothing, bo! I dare walk across with my eyes closed."

"Yes," said the Yorkshireman, "a man once did."

"And did he get across?" asked the American.

"Yes, a marble one," replied the Yorkshireman.

On some golf courses in the Mississippi valley, Indians mounds are used as hazards.

The city of Hammerfest, Norway, is the northernmost city in the world.

Asparagus has been used as food since ancient times.

Autos And Lightning

Motor Car Is Fairly Safe Place In Electric Storm

The rarity with which automobiles are struck by lightning is brought to mind by the death of a Detroit doctor near Dunnville, Ontario. When the bolt struck, the car got out of control and crashed into a Hydro post, causing fatal injuries to the driver. It was an unhappy ending to a holiday; but we cannot recall an automobile being struck by lightning before.

This may seem strange to those who know something about electricity, for metal is a good conductor and rubber an insulator. It would seem as though the metal of the car should attract atmospheric electricity and the rubber tires prevent its escape to the ground. But, apart from the fact that lightning rarely strikes anything, the downpour of rain which accompanies a thunderstorm is good protection for a car. The car is saturated with water, which covers the tires, and water is an excellent conductor of electricity. It acts as a kind of lightning rod.

A building of steel framework is the safest place during an electric storm. The current runs down the steel into the ground. Because it has plumbing pipes and electric wires, the city home is also safe. In the country where they lack these devices buildings have to be protected with lightning rods. The chance of a house being struck is on an average, once in a thousand years. This seems to be higher risk than that to which the driver of a car is exposed when caught in a thunderstorm.—Hamilton Spectator.

Words Are Merely Servants

People With Ideas To Share Need Large Vocabulary

How large a vocabulary must one have to know the English language? Dr. C. K. Ogden says in the London Times that a tea shop waitress uses from 7,000 to 8,000 words, while a skillful lawyer uses 50,000. Winston Churchill, with the largest vocabulary of any British statesman, he credits with some 60,000 words. Highly educated natural scientists in the engineering branches have the largest vocabularies, up to 80,000 words. Yet Japan compiles a dictionary of "all necessary" English words, with a total of 900; a Chinese dictionary has 850. Words are merely the servants of ideas. Perhaps what one needs depends altogether on what ideas he has to share with others.—Christian Science Monitor.

New Order In Force

Will Extend Area For Movement Of Cattle To United States

Recognizing the progress made by the Canadian dairymen, farmers, and officials in eradicating tuberculosis among cattle, the United States, after August 1, 1935, is admitting cattle from modified accredited areas in Canada without further tuberculin-testing, under an order issued by the Bureau of Animal Industry.

The United States has previously been admitting cattle from accredited herds in Canada without further test, and the new order is an extension of the procedure to areas in which all cattle have been tuberculin-tested and in which the extent of the disease has been found to be less than one-half of 1 per cent.

The procedure places the movement of cattle across the border on essentially the same basis as the movement of cattle among the states. The two countries have been working to eradicate tuberculosis among cattle along virtually identical lines. As a safeguard against the introduction of other communicable diseases, the customary procedure of requiring a general health certificate is being continued.

Forms Link With Past

Famous Garden Of Bank Of England Must Go

Perhaps the most lamented of all among the features of the old Bank of England that are to vanish as a result of the present rebuilding of the Bank is the famous garden, doubly regrettable, from the point of view of history and beauty, for it forms a definite link with the dim past.

Before the garden was made, the site was occupied by the grave yard of the Church of St. Christopher-le-Stocks. It is probable that the hill on which the Bank now stands was once a prehistoric village. Few people know that a bank clerk was buried in the Bank garden in comparatively recent times—he was Mr. Herbert Jenkins, a man seven feet six inches in height. His friends were so afraid that his exceptional stature might attract body-snatchers that they gained permission to have him interred within the walls of the Bank. He was buried at midnight with a goldscoop in his hand.—Overseas Daily Mail.

Ants have been observed to set broken legs of injured companions in a kind of plaster.

The ionosphere is an ionized shell that surrounds the earth at a height of 200 to 500 miles.

Big Claims Are Made For Death-Ray Device Of British Inventor

Should Be Popular

Talkie Machine Will Operate In Five Languages At Once

A Budapest inventor has devised a machine which makes it possible to shoot a talkie scene in four or five languages simultaneously. While the actors are speaking one language in the studio, four different languages are automatically synchronized on the sound track on the edge of the film.

The finished film can be projected with dialogue in any one of the five languages, this enabling a cinema proprietor to run the film in French at one performance, in German at another, in English at a third, and so on, simply by switching the sound track from language to language. But the device is primarily devised for use in cosmopolitan centres where the population speaks several languages.

The film will be projected in the language which is most popular, while ear phones will be provided for other patrons who, by simply plugging in to the language they understand, will be enabled to enjoy the talkie to the full.

Buried City Discovered

Interesting Find Made During Excavations At Vienna, Austria

A complete subterranean city of vast extent is slumbering under Austria's capital, it was discovered when new pipings were laid in the Zoller Gasse, near the centre of Vienna.

Structures nine stories deep have been found, and in some cases subterranean passages reached a depth of 120 feet below the present level of the city.

A number of spacious underground halls, measuring 36 feet in length, 20 in width and 15 in height were discovered. Their walls were lined with brick masonry.

Apparently the halls were the main thoroughfares of the hidden city, as they are the points of issue for a maze of intricate galleries extending over an area of several square miles.

The discoveries so far made include an underground cemetery, where mounds of human bones and numerous coffins were found, and a vaulted catacomb chapel with remnants of wall paintings.

New Wheat Developed

Resists Rust And Has No Yellow Flour Defect

A new rust-resisting spring wheat without the "yellow flour" defect which has prejudiced housewives against other varieties, has proved of extreme value in the plague sweeping northwest fields, Dr. E. C. Stakman, University of Minnesota pathologist, said.

He pointed out, however, that owing to its comparatively recent introduction, there is not enough seed to plant a considerable acreage.

A possible solution for farmers, he said, would be the planting of the available Thatcher seed, supplementing it with Marquillo, which also has weathered the rust well but is not recommended for general commercial growing because of the yellow color of the flour produced from it.

Revived Plants For Show

Discarded By Fashionable Exhibitors Doorman Took Them Home

Peter Podneck, Rockefeller Centre doorman in New York, couldn't stand to see flowers and plants thrown away just because they had lost their first blooms. So each day he carefully gathered up the plants discarded by fashionable exhibitors at Horticultural hall, took them home, replanted them in his garden and nursed them back to freshness. Later he entered his revived plants in the first annual flower show for tenants and employees, and connoisseurs said that he probably would win a prize.

Indians and the early settlers collected, and also grew, mint for their own use.

The tendon of Achilles, located in the heel, can resist a strain of 1,000 pounds without breaking.

Primitive peoples have no system of dividing the day into hours.

Mend slashes in oilcloth with adhesive tape stuck to the under side.

Has a "death ray" been discovered?

Nothing has been the cause of more speculation than recurrent reports from Bavaria, Austria, Italy, the United States and England itself, of the discovery of devices capable of shooting an electric force powerful enough to cripple the ignition of aircraft and even to shrivel up all life within range.

No notable scientist has as yet substantiated the claims made for these devices, and some have expressed skepticism, while the war office has been silent concerning its possible possession of such an instrument of defence. However, in England there is the firm belief that because of defence measures and "death rays," air raiders will not have things their own way in the next war.

Considerable interest has been aroused in what is happening in a lonely part of England, in a small bungalow surrounded by electrically charged barbed wires, where a British inventor, Harry Grindell Matthews, has been working on a "death ray."

His retreat is "thirty miles from nowhere." He does not see visitors. He works in a studio and laboratory. His privacy is ensured by steel doors, barbed wire and burglar alarms.

Col. P. T. Etherton, one of the few men who has visited Matthews' laboratory, came back with a sensational story of the experimenter's plans. These include:

To perfect a device for detecting the presence of submarines 30 miles away.

To discover a ray to kill disease germs.

To set up a new aerial defence for London, or any other city, by rockets and steel-wire "aprons" hanging in the sky.

To devise rocket aeroplanes to travel at a speed of six miles a second carrying loads of explosives.

"It will be possible in time," Etherton quoted Matthews as saying, "to arrange an electric charge with lightning speed to arrest aeroplanes in mid-flight, to stop motors and internal combustion engines in their tracks."

"This ray will naturally cost a great deal to operate over long distances."

An aeroplane caught by his protective ray would not be destroyed but, with its engines useless, would be forced to land.

Matthews' promised rocket projectiles which would have a short trajectory, would soar thousands of feet high, explode and pour out steel "rain" attached to floats. The steel, thin as silk thread, would crash attacking aeroplanes by tangling up their propellers.

If warning were received of a raid on London, for instance, rockets would be shot to the height of 30,000 feet in 4½ seconds. The wire curtain would surround London.

Etherton disclosed that Matthews' rocket aeroplanes are driven by gas derived from liquid hydrogen, capable of terrific propulsion. Six miles a second is the speed calculated for them on the basis of experiments with models.

While thus far the worth of Grindell-Matthews' devices, like similar projects reported from the U.S. and other countries, still has to be established, they remain as a potent threat to Britain's enemies and a source of hope and comfort to the civilian population which will be at the forefront whether it wants to be or not in the next great conflict.

Eligible To Vote

Indian In Alberta Resigned Treaty Rights Years Ago

At least one full-blooded Indian will be eligible to vote in the Alberta and Dominion elections this year, although treaty Indians are not enfranchised in Canada. King Bears-paw, Stoney Indian hunting guide and prospector, living west of High River, is believed the only red man in southern Alberta eligible to cast ballots at the polls. He left the Stoney reservation a number of years ago, settling on a small piece of land near Pekisko, thereby surrendering his treaty rights.

Coffee From Ethiopia

If war should stop the labors of Ethiopian coffee growers, some occidentals would have to go without their favorite breakfast beverage. The coffee grown in the Harar district of Ethiopia, the National Geographic Society said, ranks next to Mocha in the world's market.

The SNAPSHOT GUILD

It's Camp-Fire Picture Time

"Keep a Picture Story of Your Camp-fire Parties"

During these fine summer days just about everybody, it seems, wants to take advantage of every opportunity to get out to the country, the lake or seashore for camping, marshmallow roasts, corn roasts, clam bakes, beach parties and what have you.

Taking pictures at night around the camp fire is a lot of fun and the results pleasing and out of the ordinary. Since the introduction of the Photoflash lamp there has been a tremendous interest in camp-fire pictures for this lamp is so simple to operate. The Photoflash lamp is similar in appearance to a common electric bulb and can be screwed into a special holder resembling an ordinary hand flash-light tube. These holders are very inexpensive and can be purchased at almost any store selling photographic supplies. The flash is set off by pressing the flash button and it gives an intense light without any noise or smoke.

This is how you take a camp-fire picture. The people should be grouped as close to the fire as comfort will permit. The arrangement of the group can be viewed in the finder of the camera by having someone hold a pocket flash-light or firebrand at each side of the scene. This will indicate just what and who are included in the picture.

And let me warn you—be sure you have everybody in full view in your finder. Otherwise you may find the decapitated body of a dear friend appearing in the finished print.

It is well not to have the fire too bright, nor yet allow it to die down to embers when the picture is made.

With the camera resting on a tripod or firm support, set it at stop f.8 or U.S. 4, open the shutter, and set off the flash bulb and then be sure to close the shutter immediately. When using the Photoflash bulb hold it to one side of the camera, and slightly behind it. The latter position prevents possibility of lens flare from the flash. Here's one simple precaution—see that the camera is placed where possible smoke from the fire may not be blown toward the lens or between it and the subjects.

Remember too it is not necessary to own an expensive camera to take camp-fire pictures at night. You can take such pictures—and good ones—with a box camera by using the largest stop.

So if you are planning on an outdoor party at night over this weekend, or a camping trip, be sure to be prepared to take some fascinating Photoflash pictures. Here's wishing you a lot of fun and good pictures.

Education Director Takes Charge Here

Central direction of school affairs of the Abbotsford, Sumas and Matsqui districts brings to this district as director, Mr. P. H. Sheffield, formerly inspector of schools in West Kootenay. Mr. Sheffield is a graduate of Queen's University, Kingston, and has taken post-graduate work at U.B.C. and at the University of Columbia in New York City.

Mr. Sheffield began his teaching career in this province at Murrayville where he was principal of the Belmont Superior School for five years. In January 1918 he was appointed principal of Chilliwack Elementary School, where he served for three years, following which he held the position of supervising principal of Fernie schools for three years. In 1923 he was appointed to the inspectorial staff, with headquarters at Nelson, where he had charge for seven years of the Doukhobor Community Schools. More recently he has been official trustee of some 14 rural districts, besides having charge of a growing inspectorate containing approximately 130 classrooms.

Experiment First in Province

Assistant to the director is Miss Florence E. Robertson of Victoria, a qualified teacher with stenographic training.

In recent years, Mr. Sheffield advises, many rural school districts have been placed under official trustees, either at the request of ratepayers who hoped by this means to secure more effective direction of their school by specially trained men or because it was impossible to secure in some districts persons who were qualified or willing to serve as trustees. The demonstration in Abbotsford-Matsqui-Sumas area is the first instance in the province and probably on this continent where municipal areas have been placed under an official trusteeship. Under present legislation no other title than "official trustee" can be given to the educational director, but it is predicted that this will be changed when the B.C. legislature meets.

MATSQUI

Complimenting Miss Rhoda Malles, who left for Salmon Arm this week to take up a position on the teaching staff there, Miss Elsie Fredrickson was hostess at afternoon tea on Thursday. Those present were Mrs. Frank Wilson, Miss M. Bell, Mrs. J. Fredrickson, Mrs. M. Blue, Mrs. C. Sibol, Mrs. Malles, Mrs. P. Hanson, Mrs. Faulkner, Mrs. H. Rottluff Jr., Miss H. Kemprud and Miss J. Henry.

Misses Elleen and Jessie Henry, Mrs. G. Stewart and Donna and Mr. Floyd Myhre spent the week-end in Seattle.

Week-end guests of Mrs. E. Carlson were Mr. and Mrs. Peter Brown and Joan also Mr. C. Messenger, all of Vancouver.

Mrs. H. Hurum spent the week-end visiting with friends in Lawrence and Bellingham, Wash.

Godfrey, son of Mr. and Mrs. J. Kemprud, made his second appearance over radio station CJOR last week, when he was heard in a request programme of piano accordion selections. He has also secured a position with Roy Berry's orchestra, playing in a Vancouver ballroom.

Miss Annie Nygaard of Vancouver is visiting at her home here.

Mr. Ralph Kemprud spent a few days visiting friends in Bellingham.

BRADNER

Recent guests of Mr. and Mrs. H. Paver were Mr. and Mrs. A. Cutler of Vancouver.

Mr. and Mrs. W. Redman and son are spending a holiday on their farm here.

Recent guests of Mr. and Mrs. A. S. Karr were Dr. and Mrs. E. Chave and family of Chicago.

Miss Vera Baker spent a holiday at Newcastle Island.

Mr. A. Stewart of Vancouver Island is the guest of his parents, Mr. and Mrs. W. Stewart.

Recent guest of Mr. L. C. Gardner was Mr. Walter Loverock of Vancouver.

Mr. and Mrs. J. Withers and Miss May Withers are spending some time at White Rock.

Heaviest auto traffic of the year passed through the port of Huntingdon on Labor Day.

The new store in the Abbotsford Bakery building will be occupied by E. S. Plaxton.

Royal Canadian Whisky

earlier novel 'As The Earth Turns' and more ambitious, telling the changes in a rural community from 1870 to 1930."

Sounding Harbors by Eleanor (Mercein) Kelly. "The author chooses the Dalmatian coast as the setting for these six travel romances. Not a study of Yugoslavia, but a collection of charming, sympathetic, candidly sentimental tales."

The Folks by Ruth Suckow. "A long novel full of the homely details of family life as lived in a small town."

Winged Victory by V. M. Yeates. "This book tells the story of six months during 1918, when Tom Cundall, the chief character, was a fighting pilot in a British air-unit on the Western front. A long bitter, faithful and truthful book, in its uncompromising courage the best intimate account of the war in the air which has yet appeared."

Want Adlets
